

ALL NEW Generation II Air-Ram

Since 1939, Air Draulic Engineering's Air - Ram cylinder has helped clear snow from New England highways. Developed by snow plow operators tired of the maintenance and cleanup associated with conventional hydraulic cylinders.

Over the years, we have compiled a hit list of small issues that you may have encountered during the rough New England winters. After years of development we are proud to introduce to you Air Draulic Engineering's all NEW Gen II Air - Ram!

The NEW Gen II Air - Ram is cheaper than stainless steel models but just as durable. Featuring a cast iron head, precision machined UHMW push plate, and heavy duty seals. The Gen II Air - Ram uses the truck's existing air brake system to power its 2" diameter steel piston and is capable of lifting snowplows up to 12 feet in length and weighing up to 4000lbs with 100psi.

Black powder coated.
Rust & Pit free.
Comes fully assembled with a limited 2 year warranty.
Interior guaranteed not to RUST, BUST, CRACK, or PEEL

Optional Parker™ joystick valve.

Specially formulated
Air-Ram Piston Lube

- NO rust
- NO freeze
- NO seize

\$698.00*
